

HARIOM ACHARYA

Computer Engineering Student | Aspiring Software Engineer | Python • DSA • Backend

Email: hariomacharya1@gmail.com | LinkedIn: linkedin.com/in/thenameishariom | GitHub: github.com/hariow

SUMMARY

Computer Engineering student at Government Engineering College, Modasa, building a foundation in software engineering through Python, Data Structures & Algorithms, backend development, and practical projects. Hands-on experience with Python, C, C++, FastAPI, REST API fundamentals, Git/GitHub, and AI/LLM application development. Currently building backend and AI-powered applications while strengthening problem-solving and software development skills.

EDUCATION

Government Engineering College, Modasa — Gujarat, India

B.E. in Computer Engineering — Currently pursuing, Semester 3

CBSE — Class XII, Completed

TECHNICAL SKILLS

Programming Languages: Python, C, C++

Web Technologies: HTML, CSS

Data Structures & Algorithms: Arrays, Strings, Stacks, Queues, Recursion, Backtracking, Greedy Algorithms, Problem Solving

Backend & APIs: FastAPI, REST APIs, Uvicorn, Pydantic

AI / LLM: Groq API, Prompt Chaining, LLM-based Application Development

Tools: Git, GitHub, VS Code, uv, Python Virtual Environments

Application Development: Flutter, Gradio, Python Document Processing

PROJECTS

HireMeAI

AI-Powered Resume & Job Application

Python • FastAPI • Groq • Pydantic • python-dotenv

- Developing a backend application with FastAPI and Uvicorn for resume and job-related workflows.
- Integrating the Groq API to add LLM-based functionality to the application.
- Using Pydantic models for structured request and response validation.
- Managing API credentials and application configuration through environment variables.
- Building document-processing functionality for resume-related workflows.
- Organizing the application into separate backend and frontend components.

Status: In Development

Uptime Monitor

Website Availability Monitoring Utility

Python • Requests • Git/GitHub

- Built a Python utility to monitor website availability through HTTP requests.
- Checks endpoint responses and reports the availability status of monitored websites.
- Used a Python virtual environment for isolated project dependencies.
- Maintained and version-controlled the project using Git and GitHub.

VitaMind

Flutter + FastAPI Application

Flutter • FastAPI • Python

- Worked on an application combining a Flutter frontend with a FastAPI backend.
- Developed and worked with backend API endpoints for application functionality.
- Integrated frontend-to-backend communication through API requests.
- Worked with structured API inputs and user-related data.

Medical Text Explainer

AI-Powered Medical Text Explanation Application

Python • Gradio • AI/LLM

- Developed an interactive application for explaining complex medical text.
- Built the application interface using Gradio.
- Explored LLM-based approaches for transforming technical medical information into more understandable explanations.
- Worked with model integration and application-level AI workflows.

DATA STRUCTURES & ALGORITHMS

- Practicing Data Structures & Algorithms primarily in Python.
- Solved problems involving arrays, strings, stacks, queues, recursion, backtracking, and greedy algorithms.
- Implemented problems including Two Sum, Valid Parentheses, Min Stack, Queue, N-Queens, and Rat in a Maze.
- Maintain a Git/GitHub-based record of DSA practice and problem-solving progress.
- Currently progressing through LeetCode-oriented algorithmic problem solving.
